

PD Assist update

The BC Renal Agency is developing a business case for a provincial PD Assist (PDA) program based on its PDA pilot project.

The PDA pilot has operated for the past 18 months, providing support to patients in four PD programs within the Metro Vancouver area. The project is focused on patients who need help to maintain their PD care – generally elderly or disabled patients, and is designed to help them succeed on PD by offering relief through respite care or long-term assistance.

Pending approval of the business case, the Renal Agency plans province-wide implementation of the service.
